

KERAMIC-K[®]

PHOSPHORESCENT FRAGMENTS

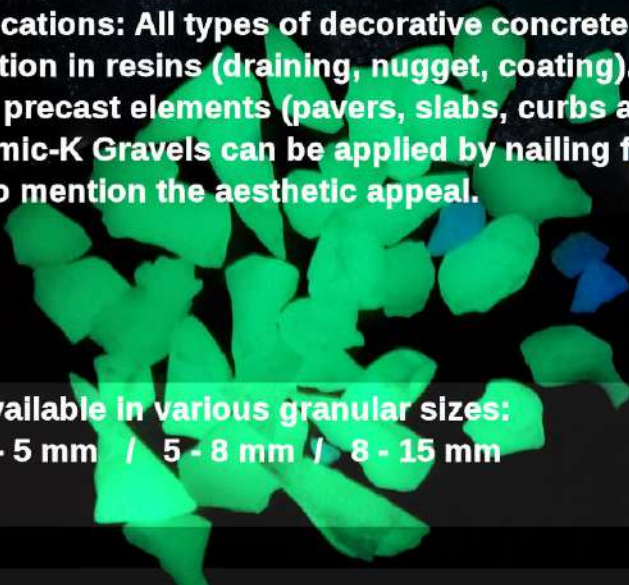

Our stone fragments store light and glow in the dark. Glass-based, with a rare earth content, these fragments are naturally luminous. They require no maintenance and their phosphorescence can be active for several decades.

Our phosphorescent gravel recharges quickly with all types of light, and are highly efficient and effective in complete darkness, indoors and outdoors. Their level of phosphorescence is intense, and they remain visible for several hours.

Non hazardous material.

Applications: All types of decorative concrete (deactivated, roughened, sandblasted, polished...) Insertion in resins (draining, nugget, coating). Insertion of phosphorescent gravels in all precast elements (pavers, slabs, curbs and steps).

Keramic-K Gravels can be applied by nailing for economic consideration not to mention the aesthetic appeal.

Available in various granular sizes:
3 - 5 mm / 5 - 8 mm / 8 - 15 mm

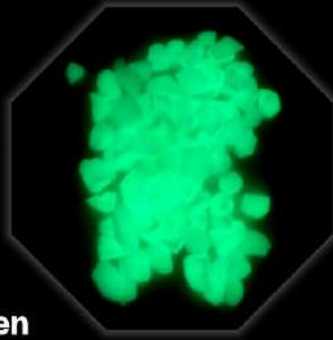

2 fragments versions:
- Rough (sharp edges)
- Polished

Appearance by day : colourless and matt finish
Appearance by night : 3 phosphorescent colours
(Green, Turquoise, Blue)

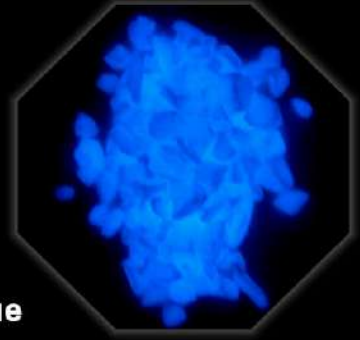

Packaging:
- 25kg Bag
- 1T Bag
